

## Protection covers/structures for the petroleum industry

Client: Nemo Engineering

Protection covers/structures have been analyzed. The covers are designed to withstand installation/handling loads as well as loads from fishing gear and/or loads from falling objects (impact loads).

- Material selection
- Laminate lay-up
- Structural design including FEM-analyses of GRP parts and interfaces
- Analyses of lifting, installation and service loads
- Local design of lifting points
- Design reports
- Advising during production and testing

# Offshore

Examples of some of the protection covers/structures analyzed
